Overview

Words describing the experience of international and national homoeopaths.

The course is case-centred and a huge variety of pathology, drug dependent cases and neurological cases were shared. The style of teaching ensures the patients are seen by the delegates, the remedy discussed, alongside comparison of medicines and information on management along with pathology explained. The implementation of the Organon of Medicine is included in the discussion to encourage the application of safe, simple, classical homoeopathy. The following abbreviated cases demonstrate some of the learning available to the homoeopaths present.

These 20 cases were shared on 28th February 2025, with the patient present in the classroom. The Bengali speaking student assisted with translation and the Hindi speaking students likewise.

Case-1

Female with quiet demeanour, likes fresh air, cold food, chilly and easily moved to tears. The 5.7 x 6.0cm fibroid has reduced slightly over the past year whilst her general health maintains at a good level. Her menstrual loss has significantly reduced. Pulsatilla has started the case.

Note-Discussion regarding whether to wait, repat, give a higher potency or change to Bryonia concluded with the decision to remain with Pulsatilla at a higher potency as her energy can withstand the 10M prescribed

Case-2

A 20 month baby who was born angry, and startles at the least sound was unable to sit independently, has been diagnosed as suffering from Hypoxic Ischaemic Encephalopathy. The case was started with Arnica with slight changes and due to the nature of the constipation, stubbornness and a strong aversion to being carried was noted, Bryonia was prescribed. (Allen's Keynotes) The clapping following the conclusion of the explanation resulted in a huge, melt the heart smile from a little person who was quietly sitting on his Mother's lap. We look forward to more changes.

I Case-3

A 16 year old student was extremely fearful about the health of his heart. He was especially anxious as his exams were approaching and even at the thought, he had heart palpitations which compounded his fear of a heart attack. Weepy and hurried, love of fresh air. One dose of Lilium Tig 200C completely allayed his fears, he has performed well in his exams and his Father was especially delighted sharing his enthusiasm for homoeopathy with the class, saying that his son's life is changed. Lilium Tig has the peculiar, striking symptom-anxious about incurable disease, fear of heart disease. (Allen's Keynotes)

Note – Aphorism 153, 209

Case-4

A well developed girl aged 12 (onset of menses aged 8) has delayed speech, is an attention seeker – shouts and throws things, cannot communicate. Diagnosed as autistic (neuro-diverse) likes to keep her things tidy. Desire for potatoes with canine hunger is becoming more tolerant and content with Carcinotin.

Case-5

An 8 year old boy with delayed development and a history of convulsion from age of 6 months has been given a diagnosis of autism. He has extreme fear of animals and dark, pain in the legs, desire for meat and restless. His Mother suffered from an electric shock in her pregnancy. Calc Phos maintains his stability, with improved speech, gait and some improved focus to date.

Case-6

A 41 year old mother of 3, suffering from itching all over the body with a pricking sensation. Frequent sharp headaches and frequent conjunctivitis. Is improving steadily with Juglans Cinerea with occasional episodes of itching.

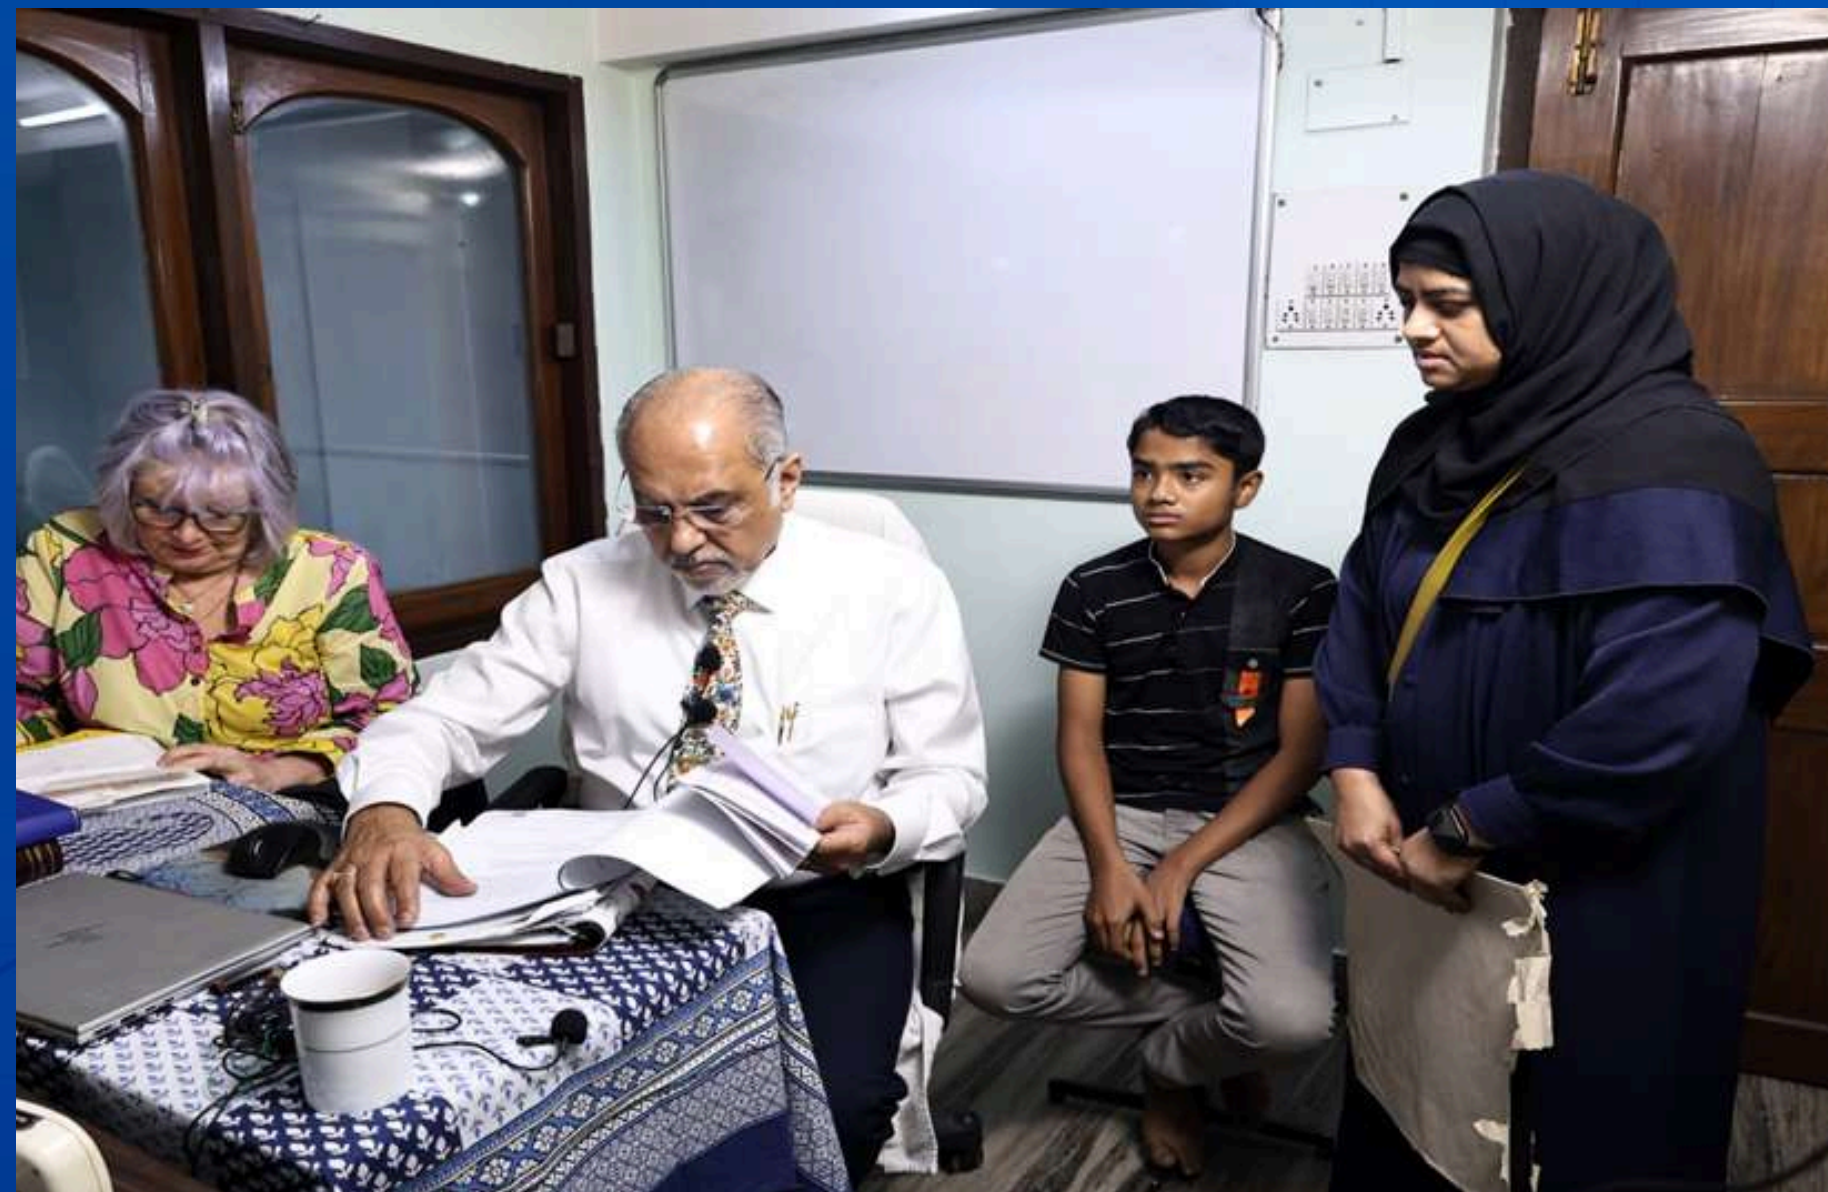

Case-7

60-year-old male travelling from Bangladesh suffers from recurrent headache > in open air, hot patient who desires sweet. His long history of breathlessness and joint pain and slight incontinence are all stable with doses of Sulphur at appropriate intervals using the Kentian scale of ascension.

| Case-8

12-year-old had an onset of acute pancreatitis at 8 years of age. History of fainting, vomiting and poor appetite, (2 mouthfuls is just managed and fills him completely). A tincture of Aegle Marmelos was given to support the digestive symptoms, along with Lycopodium 6C a specific potency for Lycopodium colic. His abdominal gas remains which renders his report at 70% better, however all pain and pathology reports substantiate the optimism of improvement.

Case-9

A 24 year old male student at the Kolkata homoeopathic college has suffered with a scalp rash (pimples) and hair fall. He is anxious and pessimistic which challenged the case taking. Finally, it was established that the pimples have disappeared with a previous homoeopathic treatment but he is still concerned with hair loss, (He loses 4 single hairs in the shower). His ardent attitude along with constipation and haemorrhoids and ineffectual elimination indicated Nux Vomica which has been given up to 10M. He remains pessimistic but all the physical symptoms are better.

Case-10

Ocimum Sanctum was given to a 7 years old child to manage his severe coryza which is the most troublesome symptom at present. His respiratory and whole-body weakness was precipitated by the Japanese Encephalitis vaccine which unfortunately placed him in hospital for 2 months.

He was born well, developed well. Then his health deteriorated rapidly, at age 2 when he was unable to communicate, unable to walk or stand with low appetite. He reacted to the first dose of vaccine with fever and weakness which the parents questioned. The allopath requested them to wait an additional two weeks before giving the 2nd dose which the doctor insisted was given. The caring (but uninformed) parents felt they had no alternative when the respected doctor advised them to do this. The boy has a smiley demeanour and is still unable to walk. His desire for cold food, fresh air, thirstlessness all confirmed the choice. After a year of treatment, the improvement slowed and he was given the tautopathic Japanese Encephalitis vaccine in potency to 'unblock' the case. He is now steadily improving with Pulsatilla.

Note- He also suffers from a tickly, stickiness in the throat and as the family travelled from Delhi (overnight train) he was given a dose of Coccus Cacti 30C to take as an acute when needed.
